## Book Descriptions:

# 8161a manual

We provide this page to assist you in using or replacing your product. Repair and calibration agreements and perincident services are available from Keysight Service Centers. For the best experience on our site, be sure to turn on Javascript in your browser. A pulse generator is a piece of electronic test equipment that engineers use to generate rectangular pulses. An electromagnetic pulse generator is best for digital, not analog, circuits. Engineers can inject pulses into a piece of equipment under test as a stimulus as they test the device, using pulses to confirm the equipment's proper operation. Calibrations None NIST Traceable NIST Traceable With Full Data ISO IEC 17025 Accredited Qty Request Quote Request a Quick Quote Notify me if price changes Add to Wish List Add to Compare Details Additional Features All pulse parameters are programmable either from the frontpanel keyboard or via the bus. In addition, each parameter, value, unit, as well as any error is logically displayed on the front panel. Nine complete frontpanel setups can be stored and recalled either from the frontpanel or via the GPIB bus.
