In order to navigate out of this carousel please use your heading shortcut key to navigate to the next or previous heading. Amazon calculates a product's star ratings based on a machine learned model instead of a raw data average. The model takes into account factors including the age of a rating, whether the ratings are from verified purchasers, and factors that establish reviewer trustworthiness. Please try again later. Bookman 5.0 out of 5 stars The printer was added to my computer easily and the software, P touch editor, is simple to use. I also bought a continuous label roll and the integrated cutter makes

customs labels easy. <http://acwf-hrtc.com/userfiles/cushcraft-r8-antenna-manual.xml>

I use this facility to create 3x5 index recipe labels which I then stick to 3x5 cards. For my journal, I can create lists which I can stick in for a professional look. Sorry, we failed to record your vote. Please try again Sorry, we failed to record your vote. Please try again Im sure there are bad units once in a while but i have been using the very same one I got in 2011. It still works perfectly. If mine broke i would get another. Sorry, we failed to record your vote. Please try again Ive maintained it as directed in the manual. It became jammed with one label that had one edge peel back to reveal the sticky side. There was NO way to clear it from the rollers. They do not come out of the machine. We worked on trying to clear this and then to take it apart. Took every screw out and still would not separate to reach rollers. Now its in the garbage. Im not a heavy user of this unit so it has never been heavily used. Heading out to buy a Dymo like we have where I work. That is a cheaper unit and has made thousands of labels without ever jamming or failing. Sorry, we failed to record your vote. Please try again Installed it, plugged it in, turned it on. communication error. This went on for hours. I was finally able to get a label printed around midnight. I went To bed soooo happy. Wth is that Spent an hour trying to figure that out. Decided its not worth my aggravation, packed it up to return. Im using Windows 10. Sorry, we failed to record your vote. Please try again Setup couldnt be easier, plugged it in and windows found it and installed what was needed to run it. The software, however is another story, if I could have rated it by itself I would give it three stars as it leaves a lot to be desired, like choosing a label based on its item number rather than trying to figure out the size, and its clunky saving, saying that it cant when it does. Allinall, I would highly recommend the printer. Sorry, we failed to record your vote.

Please try again Go to brother website and troubleshoot from there. the website made it super fast and easy. You will NEED the Ptouch software to print properly so save yourself some time and just start there and add all info into it rather than trying to print from other sources like word, excel etc as advertised. Not a huge deal with shortcut keys these days. With that written, I can now write about what I love about this thing, once I figured out the software. The labels have enhanced my personal and professional life as well as played a role in local health promotion. I use this machine for file folders, name tags, Instagram promo stickers, closet organization, shipping labels, customer info tags and craft projects. options are endless Star removed due to outdated CD and instruction manual took way too long to figure out it was worthless. Sorry, we failed to record your vote. Please try again The first one I bought worked for several months then died. I replaced it with the same model and within 2 weeks it started sounding like it was crushing gravel and the stickers would get stuck and roll back into the machine which makes it almost impossible to fix because the roller doesnt come out. Once that happened the labels wouldnt print correctly. Heading into the holiday season, I decided to send it back and have it replaced. This one lasted 2 days before it started the same process. I am going to return this one as well and move onto another machine. I am not impressed with this printer at all. Sorry, we failed to record your vote. Please try again The picture should not be of the lid when it is up, but when its down. I didnt know what I was looking at until after the fact. It literally snapped right off with no effort as I was trying to remove the protective covering from the ql 500 which was difficult to do and yes I had the lever pulled the right way.

<https://www.thebiketube.com/acros-bosch-tassimo-manual-red-light>

Because of the poor design and the cheap plastic used, the piece that got cut off went inside the printer to a place that requires you to literally take the whole device apart to remove or to take a part the glue used to hold it together. In my life, I have never seen such oversight over something this expensive. For that I am going to write a complaint and demand a refund. Now We got a replacement and it works just fine. Thanks for making it easy and sending us the replacement so quickly! Sorry, we failed to record your vote. Please try again First, the labels that were shipped with it were not the ones shown in the photo. The ones in the photo are shipping labels and the ones

shipped with the unit were very small address only labels no room to put a return address on the same label. Incidentally, you must use this companys labels, as they are in a little cartridge designed specifically for a Brother Printer. As others had mentioned in the Questions Answered, setup for Windows 10 was not included and a separate driver needed to be downloaded and installed. Also, once the recipients address was entered, I could not figure out a way to edit within the label once the contact info is imported to the address label. Overall, I found this software extremely difficult to use. Thus, I am returning it. Sorry, we failed to record your vote. Please try again With my new computer, I wasnt able to load the original software, yet I had a folder with labels in this format created over the years. I didnt want another kind that would require me to recreate all these labels. Amazons price was right too. Installing it on my new desktop was so easy, and I could tell there have been upgrades to the model. It was a necessary but painless purchase. Sorry, we failed to record your vote. Please try again First, I found the set up manual to be very confusing. Maybe I am just not good at these things.

<https://www.cbiinc.org/images/complete-machine-quilting-manual.pdf>

For instance, they started to use initials for things that they had not defined, and in fact I dont think I know what the initials stand for yet. That is frustrating. Second, the trial labels that come with the unit are of course the smaller which of course is because they are cheaper. The labels you need to print postage from this printer for PayPal are the model numbers DK2205 or DK2212. The quick solution would be to run out to your local office supply store and buy the needed labels, except that none of the office supply stores in my town, not a small town, carry those labels. They all carry the same two labels, so I presume that the ones they carry are the most common ones. Anyway, so after waiting a week to get the printer, I now have to wait a week to get the labels to try it out. Arrrgggg. I am sure I will like it once I have it all together and have used it. I will update my review then. Okay, I have had this printer for a few weeks now and wanted to update this. Once it was installed and once I had the correct size labels which I bought the generic labels also available on Amazon for a considerable savings it is a breeze to use and a great time saver. I have had some problems with the Java software not being set up quite right so that I get some annoying popup screens every time I go to print a label, but I presume that if I spend some more time configuring things I could get rid of those. Obviously they are not annoying enough that I have felt a need to spend that time. Dont hesitate to buy this printer for printing postage from PayPal, it is a breeze once it is set up. Updated on May 7, 2013. I still cant believe how easily this works. This product will make me take a closer look at other Brother products the next time I am in the market for a printer. If you sell on EBay and want to quit running to the post office, dont hesitate to buy this postage printer. Sorry, we failed to record your vote.

<https://cocoonproperty.com/images/complete-list-of-army-field-manuals.pdf>

Please try again Installation was pretty easy, and the quality of print is very good. I use my printer for Ebay sales, and yes, without a doubt Ebay supports this printer for mailing. If you have issues with Ebay mailing, delete all your old Javas Oracle has a tool to do so and install the latest Java version only. Then, make sure you select the QL00 as your printer in Ebay before you buy any labels. The result is a very cheap and easy way to create Ebay mailing labels. I also use the printer for organization. If you spend a few moments Bing QRcodes, and youll see you can print nice small code labels that you can place on your containers. The scanned label can contain text of what is in the container, or link to a service on the internet that really expands the data you can place into a single little label. Net is, high quality, durable, easy to use, and very modern device with tons of uses. Enjoy. Sorry, we failed to record your vote. Please try again Was not happy, as it was still in good working order. This new labeler seems not as up to date as the other, has a larger foot print, and it took me a very long time to get it to work, with little or no help from support. I finally managed to download the software from the web, rather than use the CD that came with it. Why didn't they tell

me to do that in the first place. I now have it working and is satisfactory to my needs. Sorry, we failed to record your vote. Please try again. Please try again. Please try again. Please try your search again later. Manufacturer Video Next page Upload your video Video Customer Review The 5 Best Label Makers See full review BestReviews Onsite Associates Program Amazon calculates a product's star ratings based on a machine learned model instead of a raw data average.

The model takes into account factors including the age of a rating, whether the ratings are from verified purchasers, and factors that establish reviewer trustworthiness. Please try again later. Terrence C. Watson 2.0 out of 5 stars But this new label printer is too old a model to work with my new Microsoft Surface Studio computer. The Surface Studio only has USB3 ports, which are backwards compatible with USB2 which is backward compatible with USB1, except apparently not if it is made by Brother. Because new computers typically no longer come with CD drives, I had to download the driver for it from the Brother site; no problem, that was expected. But when I tried to print a test print, I got the alarm that it was not compatible with USB3. I tried fooling it by running it through a USB2 port on a USB2 multiport box plugged into the USB3 port on the new computer. That didn't work either, as expected. I connected the label printer in to that computer, and it ran the test print fine. But the software to make the labels looks even more antique than the printer itself. I haven't yet been able to figure out how to format and print a label with it, and am not sure it is worth the effort to keep an outdated computer on standby just to run an outdated label printer with outdated software. I almost never return anything, figuring I am at least partially responsible for making the bad decision to buy it. But if you are running Windows Vista on a ten year old computer, it will probably work. I will fret about it overnight and decide in the morning whether it is going back or not. It prints labels quickly and reliably, and was very easy to set up and use, going from a Vista 32 bit machine to a Windows 7 64 bit machine without a hitch. I downloaded the drivers directly from Brother's website, and I recommend everyone to do the same. I have absolutely nothing bad to say about the QL500, it has earned its keep many times over. One for use, one for backup.

www.americanapi.com/wp-content/plugins/formcraft/file-upload/server/content/files/162733e7f29d5c---briggs-stratton-6-hp-ohv-manual.pdf

I was already impressed with the specs from reading online. It improved on the QL500 in most ways; better print quality, faster, smaller and more compact but without sacrificing build quality, detachable power cord the QL500's power cord was attached; I like detachable cords as they're easy to replace in the event the original is damaged and an auto cutter. I know the QL550 had an auto cutter, but at the time I was in the market for a label printer it was twice what I paid for the QL500 and the only advantage was the auto cutter. A big deal not mentioned a lot is the cutter life. On the QL500, the cutter life is 5000 continuous labels the kind I use for shipping labels. For the sake of comparison this is around 14 labels a day for one year. I've never done that many my max was maybe 100 labels a month, or 34 a day and my QL500 is still cutting pretty smooth. On the QL570 the cutter life is 150,000 continuous labels, or 411 labels a day for one year. I doubt I'll ever hit that mark. I think the cutter will outlast the printer. One small disadvantage though, is that the cutter on the QL570 isn't replaceable like the one on the QL500. But by the time you factor in the cost of replacement blades, after buying replacements 3 or 4 times you've spent enough to buy a QL570 and don't get nearly as many cuts for 4 sets of 2 replacement blades plus the one that comes with the QL500 and you'd be at 45,000 cuts, so really, there's no reason to buy the QL500 over the QL570, especially with the price of the QL570 constantly falling under half a Benjamin. Other small advantages over the QL500 include a multicolor status light the original was the single green LED and a 25 sample roll of continuous paper tape the QL500 only included the sample roll of address labels along with the sample roll of address labels. As with the QL500, setup was a cinch.

I made sure to first go to brother's website and grab the correct drivers for my operating system Windows 7 64 bit and the latest version of PTouch Editor. Again, I was up and printing my labels within minutes of opening up the box. I really can't understand why so many others have so much trouble, and then blame Brother and rate the QL570 poorly because of their own incompetence. The QL570 prints quickly and reliably, and the print quality is spot on. I just catch the labels with my hand as they come out. Or let them land on the shelf where the label printer is stationed. Changing rolls is quick and simple, as it should be. The labels themselves can be expensive, but I usually stock up when they're on sale. There are also aftermarket alternatives. I paid less for the QL570 than what I did for my QL500 and couldn't be happier. It's an excellent label printer, especially if you sell things online. Before you start all these machinations, make sure you close all other applications. 2 You have to get the Windows 8 software and printer drivers from Brother Solution Center. You have to know whether your operating system is 32 or 64 bit. 3 For some strange reason, Brother downloads ONLY work with Microsoft Explorer and if you don't use that browser to get the downloads, you'll be asking for trouble. 4 Make sure you download your printer drivers to a place you can find them. Otherwise, you won't be able to open them and install them. 5 Make sure your device is NOT connected when you're doing the Windows 8 installation. 6 After all the nonsense of downloading stuff, you will need to restart your computer. Once you've done all that, you can actually USE your device. It's pretty slick except it's a little difficult to know what kind of labels are installed, if you haven't used this before. There's a "Check Media" button that allows you to immediately know what you've got in the device. After that, it's all pretty easy.

The labels are nice and readable and it appears from the software there are a lot of options. I would have more to assess if it hadn't taken me TWO HOURS to figure out the problems with Windows 8. Brother really needs to update their installation CDs for this product for people who have Windows 8. Otherwise you need to be really aggressive in finding the solution to installation. Very versatile. Had it for home, and loved it, and decided to buy one for the office. In the box you get 2 starter rolls, which are plenty to get a good feel for the unit. A DK2205 100ft Roll seems to last forever. Print quality and adhesive is pretty much identical to the original Brother rolls. Takes a little time to get used to their Software, but once you get used to it, it is OK. I use it to for print runs which import the DATA from EXCEL sheets, and include bar codes with it also. I also use it to print labels my kids need to tag their school supplies. A lot cheaper in the long run than buying Avery sheets. Removed 1 star because I was a little disappointed that Brother has discontinued the DKCL99 QL printer cleaning sheets. Contacted them, and the only thing they did was send me an amazon.com link, of 3rd party vendors selling probably old stock, and ALL ship directly from Japan. A little disappointed. Cleaning sheets for CURRENT model printers all QL series and already discontinued with no suggested replacements. But they DO include 1 cleaning sheet in the box; Sorry, we failed to record your vote. Please try again However, once the label is designed, click on print and it will auto cut every label. HUGE time saver! In the package, you will find 2 roll of label, small one and bigger one. It will give you a great idea how the machine can perform before purchasing other rolls. Highly recommended. Sorry, we failed to record your vote.

Please try again It took me a full evening to figure out how to use the included software to make the perfect template, and copy in a csv file of English/Arabic translations, but once I figured it out, it worked like a charm. 15 minutes later I had 200 perfect labels in a gift box. It's way more powerful, but the learning curve is correspondingly higher. Sorry, we failed to record your vote. Please try again But Still Worth the purchase Layout Editor was Very easy to use so it was simple to make it the way I want Fonts and all. Sorry, we failed to record your vote. Please try again For the prospective customers using Windows 8 be aware, you might not be happy. I have several different Brothers refusing to cooperate with new Win 8, but they work perfectly with Win 7. Sorry, we failed to record your vote. Please try again The built in automatic cutter is incredibly convenient. I use this with my Mac and while the software looks a bit dated, all the functionality to create templated or

custom labels in a variety of formats. A higher end model that supports wireless connectivity and AirPrint for Macs and iOS devices is also available. Sorry, we failed to record your vote. Please try again Trying to print stamps.com labels on this thing is proving to be a pain though. This thing has a better DPI than my laser printer, but images still come out blurrier. Could be the software still havent figured out how to make this work with Word 2013 Sorry, we failed to record your vote. Please try again Really great machine, prints fast, quite when its idling, and it feels well made, it came with two size label rolls. The rolls are not too expensive to replace. Sorry, we failed to record your vote. Please try again Easy to setup and use. Very pleased with this Brother product. Sorry, we failed to record your vote. Please try again Bought when on sale, similar price than the DYMO PnP LableMaker, but with far more capabilities. Also the labels are pretty cheap as well.

Sorry, we failed to record your vote. Please try again Easy learning curve as it is all on screen in live time. Very quick and easy to use. Best bargain of 2013 for me! Sorry, we failed to record your vote. Please try again At first I wasnt sure how to make it work but I just took Amazons PDF of the barcodes and used the snipping tool to get each as an image file. Then just set up the label template with that image to print. Worked like a charm! Sorry, we failed to record your vote. Please try again They are simple to use, well priced, and they just do what they are supposed to do. This label printer is quite versatile as it is capable of printing different sized labels, and it does it quickly and conveniently with its autocut feature. I bought a bunch of replacement label reels as we go through a lot of them. Sorry, we failed to record your vote.

<http://schlammatlas.de/en/node/18457>
